Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-32 and 37-82, drawn to managing and configuring components associated with routing as associated in a switch fabric environment, classified in class 370, subclass 364, 392, 394, 395, 390, 466 and 469.
 - II. Claims 33-36, drawn to managing the forwarding of data cells in a communication system that includes multiple cell framers, classified in class 714, subclass 776, 800.

2. The inventions are distinct, each from the other because of the following reasons:
Group I claims configuring components associated with a switch fabric for routing, whereas Group II claims managing cell data associated with multiple framers.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and visa versa, restriction for examination purposes as indicated is proper.

Inventions Group I and Group II are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombinations as claimed for patentability, and (2) that the subcombinations has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because managing

cell data as associated with plurality of framers is not needed for configuring components associated with a switch fabric. The subcombination has separate utility such as allocating addresses for media exchange as associated during a communication session.
